ROOT 045 Side table

design RODOLFO DORDONI

DESCRIPTION

Side table for outdoor use.

STRUCTURE

TEAK: Teak wood contains a natural oily resin which makes it extremely resistant to weather, temperature, parasite attacks and insects. The exposure outdoor creates a 1/2 mm-thick oxidation patina on the wood surface which favors its discoloration to a silver-grey color; this change does not affect its original characteristics in any way. The grey patina can be avoided or removed with the correct maintenance.

TOP

FARSENA STONE: oriental marble with a grey color and a uniform structure with shades of red and salts.

LUNA STONE: sandstone with a typical grey/light blue color.

CARRARA MARBLE: a metamorphic stone made of crystals and carbonate of microscopic size which gives a uniform aspect. It has a pearl-white color and slight grey veins.

HPL (High pressure laminate): of a great quality with a characteristic black heart, very resistant to wear and tear, humidity, steam, UV, fungi, spores and mould. It is self-extinguishing and it is class 2 fire resistant; it does not contain chlorine or asbestos and it is certified by Fira Institute for coming in contact with foodstuff.

WEIGHT

HPL top 6,5 kg;

Stone top 13 kg
