

VOLÉE SMALL

Odo Fioravanti, 2016

Volée is a Led luminaire of the latest generation, in which the formal research is combined with technological innovation. Featured by an essential design, Volée switches on with an almost tennis-style gesture: a simple wave of the hand under the head of this lamp activates an electronic device that switches the light on or off without any contact. A touch sensor over the head allows the flow of light to be regulated to four different levels of intensity (40%, 60%, 100%, 0%). A Time Out system automatically switches the lamp off after it has been on for 5 hours. The tension for the hidden-spring balancing mechanisms is provided by steel wires that allow to orientate the light emission with a fluid movement. Volée is suitable for every kind of environment, both modern and traditional.

Table lamp with direct light. A touch sensor over the head allows the flow of light to be regulated to different levels of intensity. A simple wave of the hand under the head of this lamp activates an electronic device that switches the light on/off without any contact. Frame consist of a head and of structural rod made of painted aluminium. Black power cable and plug. Plug-in power supply with interchangeable plugs (UK- USA- UE- CHN). Integrated led.
